A Concern of MY Group of Companies

my GROUP

A humble beginning…

Who we are

MY Group is a combination of businesses focused towards catalyzing the modernization of Bangladesh by providing technology driven to their clients in various market segments.

MY Company recognizes the up-to-date idea that Bangladeshi business companies need to apply in effective systems integration. Our functions strive to provide all our customers with customized and integrated technology-based solutions that enable them to maximize their business potentials. Hence, MY Company holds the patents, distribution and marketing right of a number of world-renowned high technology driven products. We at MY Company are continuously striving to satisfy our clients and target groups and also to serve them with the best by providing them authorized and complete service and maintenance solutions.

We make it our business to understand your business and link it up with today's technology to maximize product satisfaction. Through our cost-effective rates and locally unmatched knowledge and expertise, we can provide your business with the proper technology infrastructure so it grows and succeed. MY Company customers can feel secure, knowing that we are constantly and consistently at work to maximize their satisfaction and to protect their investment thorough quality ensured products and services we render.

Our Commitment

MY Company has always functioned with a keen interest and dedication to preserve the welfare of the communities they serve. Our executives have the experience and knowledge to het your company the most qualified & professional services.

"By three methods we may learn wisdom; First by reflection, which is noblest; Second, by imitation, which is easiest; and third by experience, which is the bitterest." - Confucius

The commitment they bring to their task in channeled through the organizations established by individuals at MY Company those are involved in further community development. We are also committed to provide customized Business Technology Solutions that meets the current IT and E-commerce needs corresponding to the demand of present business world. This program allows other companies to gain highly qualified IT and E-Commerce professionals without using their own resources and time.

The Key mottos our organization operate:

Quality: We do the necessary research to ensure that requirements of each client are thoroughly screened and afterwards outputs are properly checked.

Integrity: MY Company strives to establish a relationship of trust and loyalty with the clients and incorporates efficient process with the product that the clients are ultimately served with. Trust and honesty throughout the process is imperative to this group.

Service Excellence: Our companies are dedicated to the highest quality of service for every single of our clients. Our firm's values reflect a passion for excellence, personalized service and integrity. We measure our success based on each client's satisfaction with the service quality, timeliness and overall value of our work.

Our Vision

To become the most preferred Security System, Health care products & services and Communication infrastructure service provider.

Mission Statement

To provide world-class, real-time communications and integration solutions to OEM and end-user customers in the field of Surveillance, Security Systems, Health Care Products & Services, manufacturing, Automobile, Communication, Automation industries and other vertical industries based on open internationally accepted standards.

Our Services at a Glance

Maintenance Service & Program

- Checking CCTV system history and maintenance schedules
- Visually inspect all major CCTV components including cabling & connections where accessible for signs of deterioration or damage
- Check all CCTV control equipment (monitors, DVR/NVR, Multiplexer etc.)
- Check and clean cameras, lenses and housings as necessary
- Check lenses for correct field of view and adjust as necessary
- Check pictures for correct field of view and adjust as necessary
- Check recording and playback quality
- Compare current recorded images to previously taken reference images and change settings if required
- Report on any temporary obscuring of camera images e.g. growing trees and bushes
- Repair any minor faults (where possible)
- Retrain the users on the use of the CCTV system (if required)
- Discuss any issues with the customer while on site and demonstrate as required including compliance with Data Protection Act

Free maintenance: Free maintenance is provided to all our customers free for the first month. The client can later choose any of the two options below:

Option 1: Planned Maintenance

Our planned servicing system is carried out on a scheduled basis every month. The program offers you the complete audit of your CCTV surveillance system, the documentation associated with it and the training required for the operators. The program also includes above services and free online/telephone service. Client has to pay only the cost of faulty parts, which we will supply at a discounted rate. Our technical team will check the entire system as mentioned above once in a month and will resolve if found any fault/ discrepancies.

Option 2: Call Basis Maintenance:

Our Call basis maintenance system is carried out on service calls required by the clients. Our response time on your service call will be 03 (three) hours for 3 different locations at a time within Dhaka City and for outside of Dhaka City is 48 (forty eight) hours for 2 different locations at a time.

- Talukder Group
- Pacific Group
- Fu-Wang Ceramics
- DAMCO

Knowledge reference

There are many other names that cameras go by, but most of those are more related to the application in which the unit will be used vs. the type of camera. Other references speak to the housings, such as tamper-proof, weatherproof, etc.…

Bullet: A bullet CCTV camera is a wall-mount or ceiling mounted unit that is typically designed for indoor use, but can also be used to fill some outdoor applications. The camera derives its name from its sleek, thin cylindrical shape. Many bullet cameras also tout themselves as being waterproof. The camera is not typically designed to have pan/tilt/zoom control but instead to capture images from a fixed area. The unit is mounted pointing at a particular area.

Dome: Dome cameras get their name from the dome-shaped housing in which they sit. These housings are designed to make the cameras unobtrusive…not covert or hidden. Typical applications are retail, where the camera is designed to be unobtrusive, but visible. These units serve a dual purpose: "bad guys" will know the facility is being watched and patrons will feel at ease knowing the facility is being protected. Units that allow the camera to spin quickly within the housing are often referred to as "speed domes".

IR/Night Vision: These nights vision cameras have the ability to see images in pitch-black conditions using IR LED's.

Outdoor: The key to outdoor cameras is the housing itself, which must be impenetrable to moisture, insects, dust and other elements.

Day/Night: Day/Night cameras compensate for varying light conditions to allow the camera to capture images. These are primarily used in outdoor applications where security camera is positioned for an outdoor parking lot or park or gardens.

Network/IP: These Cameras both hardwired and wireless, transmit images over the Internet, often compressing the bandwidth so as not to overwhelm the web. IP cameras are easier to install than analog cameras because they do not require a separate cable run or power boost to send images over a longer distance.

Wireless: Not all wireless cameras are IP-based. Some wireless cameras can use alternative modes of wireless transmission. But no matter what the transmission method, the primary benefit to these units is still the same: extreme flexibility in installations.
